

Smarter models. Diverse solutions.  
**Software that connects.**

**SDS/2**  
**FABRICATING**

**SDS/2 Fabricating** is a solution designed specifically to meet the needs of fabricators. Fabricators simply request the model from the detailer, then can **view the 3D model and 2D drawings**, while having full **control over the creation of CNC and MRP information** necessary for the shop. Users may also use SDS/2 Fabricating's **reporting and status tools** to track the project through completion.

Through a dashboard interface, SDS/2 Fabricating brings all the fabricators' needs right to the users' fingertips. From the at-a-glance progress charts to streamlined CNC tools, the dashboard is the interface for organizing and implementing fabrication.

Detailers — often required to supply CNC files to the fabricator — will also benefit from the CNC output included in SDS/2 Fabricating. CNC functionality included with SDS/2 Fabricating will enable CNC functionality on all other SDS/2 software solutions.

Both detailers and fabricators can benefit from the automation of estimating and shop data information generated by SDS/2 Fabricating. **Learn more at [sds2.com/fabricating](https://sds2.com/fabricating).**
